

# Touchless Mobile Check-In

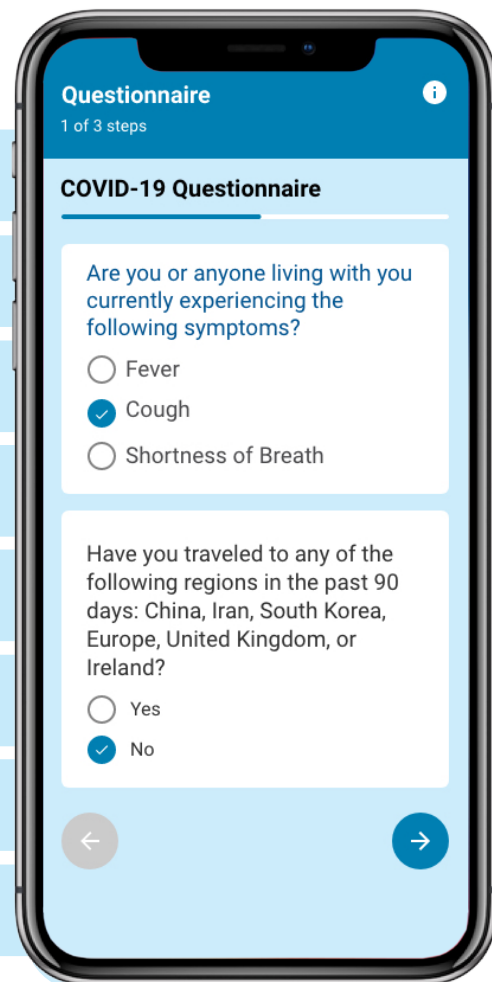

## Protect Staff from COVID-19 Exposure

### Patients Safely Pre-Register and Check-in Anytime, Anywhere

Put patient self check-in right in the palm of your patient's hands with Vecna's mobile app. Patients can conveniently manage and check-in for their appointments as well as complete COVID-19 screening questionnaires anytime, anywhere using their mobile device. There is no need for contact with onsite equipment or for costly hardware investments as patients leverage their mobile device's existing tools such as facial recognition, biometrics, mobile wallet, notifications and navigation. Patients can not only pre-register, but also easily update demographics and insurance, make payments and receive cost estimates for their care. Staff is free to focus on patient care as mobile check-in eliminates bottlenecks during the registration process. Proven integration with EMRs including Cerner, Meditech, Allscripts and more.

## Vecna Mobile App Check-in
